

Summary Slides 2007

Microsoft removed the useful 'Summary Slide' feature in PowerPoint 2007. This AddIn puts it back on steroids!

To install make sure Macro security is set to 'Disable WITH prompt' or Low and PowerPoint is closed.

Run the msi file.

Open PowerPoint and in the Slide Show Tab you will see the new section.

Select the slides to include in the summary and click 'Tag slides to include' (the tags will be remembered until you tag again)

To create a summary slide simply click 'Make summary slide'. If you would like your headings linked to the corresponding slides hold down CTRL while creating the summary slide.

This is a free AddIn and comes 'As Is' and without support.

Version 1.0.1

Added :

If Title is not present or blank uses Slide X as index name.
